PRODUCT RELEASE

INTRODUCING:

THE ALU-CAB ROOFTOP FLIP TENT!

Alu-Cab flip tents have transformed camping forever. Gone are the stresses of setting up tents and dropping them again.

The flip tent literally is up in seconds with the minimal amount of effort. To top that, your bedding can remain in place inside your tent. This means that it's almost as easy as pulling back the covers when you want to go to bed. What makes the Alu-Cab flip tent the best on the market are the added features along with Alu-Cab's high level of Alu-Cab workmanship. The other plus is, unlike most other tents, one is able to load onto the tent roof. This creates areas for solar panels, roof rack to carry wood, or even stand on the roof should you wish to use this area for game spotting.

Features:

1. The Alu-Cab flip tent is built from Aluminium.
2. The roof is built in 4 layers.
 - A. Outer layer, Anodized tread plate. Creates strong protective outer shell.
 - B. 25 mm Sajex / polystyrene. The Sajex layer has brilliant insulating properties and therefore does an amazing job at keeping out heat when needed or warmth in on those cold nights.
 - C. The other 2 inner layers are for strength and finishing.
3. The roof lifts on gas lifts. These can be set to your requirements. Should you be planning to carry extra weight on roof, stronger shocks will be used. There are strong lockable latches that keep tent closed when traveling.
4. The base of the tent is again an outer layer Aluminium. We then use an inner ply layer for stability and insulation and on top of that, we carpet in order to create a warm feel and finish. The mattress is a 75 mm high density foam.
5. The tent is supplied with 2 x flexible map reading LED lights. These are great when lying in bed reading.
6. The canvas is a high quality waterproof rip-stop. We also seam seal all the seams in order to minimise any risks of leaking.
7. The windows are covered all round with a high quality mesh in order to keep flying creatures out in the night.
8. Access into the tent can be from either side or the rear of the tent as All windows open to the base.
9. There is a sturdy aluminium ladder supplied in a bag with the tent.
10. These tents come with the Standard Alu-Cab 5 year warranty on the manufactured parts with one year on the catches, shocks and lights.

Specs:

- | | |
|---------------------|------------------------------|
| - Unit Size: | Length. 2300mm Width 1350 mm |
| | Height when closed 230 mm. |
| - Estimated weight: | 95 Kg's |
